  - Developed Python-based WhatsApp automation tool for schedule messages, reduced manual workload by 70%
  - Utilized libraries like pywhatkit, pyautogui & time module to scheduled message.
  - Enabled personalized bulk messaging using CSV file integration.
  - Gained hands-on experience in automation, real-world problem-solving, and Python scripting.

ACADEMIC PROJECTS

- ❖ **Online Movie Tickets Booking System**
  Tech Stack: HTML, CSS, JavaScript, Python, Django, SQLite

  Description:
  Developed a web-based movie ticket booking system to practice and enhance full-stack development skills.
  The project provides a user-friendly interface for browsing movies, selecting theaters, choosing seats, and booking tickets online using Django.

  Key Features:
  - Responsive Design: Optimized for various screen sizes using HTML CSS
  - User Authentication: Login/Signup system with session management using Django
  - Search Functionality: Allows users to search movies by name.
  - Admin Panel: Admin can add/edit/delete movies, shows and theatres.

ACHIEVEMENTS / HOBBIES

- Selected for Smart India Hackathon (2024)

- Successfully developed and deployed 5+ client websites

- Tech Enthusiast | Playing Cricket | Watching Movies
